

KIM BARTHEL is a Neuro-Developmental Treatment OT instructor and teaches therapists how to facilitate movement in children and adults who have difficulty with body movement. Additionally, Kim has certification in Myofascial Release, Craniosacral Therapy and Developmental Biomechanics. Kim's current practice focuses on sensory processing, the neurobiology of attachment, abuse and addiction.

Through extensive clinical experience and certification in S.I.P.T, she has developed expertise in Sensory Integration, known as "Sensory Processing Intervention". Kim has applied the concept of sensory processing with children and adults with Autism Spectrum Disorder, Attention Deficit Disorder and Fetal Alcohol Spectrum Disorder. She has also applied it to complex disorders through a lens of psychiatric etiology and attachment based challenges. Kim travels the world educating other professionals as well as developing services for children with developmental disabilities and trauma in Asia. In Israel, Kim has supported non-partisan agencies in dealing with child trauma. Back home in Canada, Kim has her own practice 'Labyrinth Therapies' in Winnipeg, Manitoba. She has also developed a mental health system for children in the Kivalliq Region of Nunavut and expanded services for high-risk youth in Winnipeg.

SENSORY INTEGRATION

TRAINING ON SENSORY INTEGRATION, FASD AND OTHER INVISIBLE DISORDERS WITH KIM BARTHEL

Looking for answers about how to understand how sensory needs are affecting your child?

Children who have FASD and other invisible disorders often have unique sensory needs. Often caregivers and support providers are mystified by these needs, the resulting behaviours and struggle to find effective interventions. This seminar will empower participants to create an intentional and supportive environment for these precious children and youth who have challenges because of unique sensory needs. In this workshop on Sensory Integration, participants will learn specific skills and strategies for supporting children through sensory integration. Based in a deep understand of attachment, sensory integration and developmental disorders, Sensory Integration provides caregivers and service providers with powerful insights for understanding the sensory needs of children and for appropriately guiding support and healthy behavior.

These principles are effective in bringing about healing for children in varied environments, such as homes, schools, day care settings, and residential treatment facilities. Participants will find powerful insights for creating a healing environment for children of any age and any level of risk.

"Kim imparts her wealth of knowledge and experience and offers it in a very engaging and meaningful learning experience."

Kathy Pyne, OT
